Examples Reference

IntelliJ IDEA GDOL

Overview

This **Snippet Generator** will help you learn the Pipeline Script code which can be used to define various steps. Pick a step you are interested in from the list, configure it, click **Generate Pipeline Script**, and you will see a Pipeline Script statement that would call the step with that config script, or pick up just the options you care about. (Most parameters are optional and can be omitted in your script, leaving them at default values.)

Steps

Sample Step

archiveArtifacts: Archive the artifacts

archiveArtifacts: Archive the artifacts

bat: Windows Batch Script

build: Build a job

catchError: Catch error and set build result to failure

checkout: Check out from version control

cleanWs: Delete workspace when build is done

deleteDir: Recursively delete the current directory from the workspace

dir: Change current directory

echo: Print Message

emailext: Extended Email

emailxtrccipients: Extended Email Recipients
